Re: Hyde Park Drainage Easement across Hunt Tract

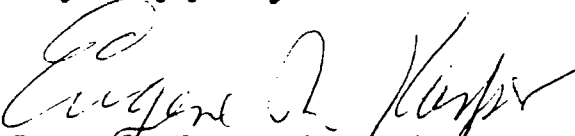

Dear Mr. Elliott:

It has been reported to us by the Pollution Control Agency that the drainage outlet for the Hyde Park Storm Relief Sub-District No. 37-A, has been restricted by the dumping operations taking place on your property.

We find these restrictions to be within the limits of a legal 20' wide drainage easement held by the City. The legality has been substantiated by the Law Department and by the Real Estate Section, Division of the Treasury. These restrictions must be removed from within the limits of this easement and the ditch restored. You are herewith ordered to remove all fill material and debris from within the limits of the easement to allow the free flow of water from the Booth Street storm sewer pipe outlet. This work must be completed by November 30, 1969. The City will furnish alignment staking to locate the boundaries of the easement, at such time you actually have equipment ready to do this work.

If you fail to comply with this order within the time allowed, the City will hire a contractor to do the work and the expense incurred plus certain penalties, as provided by law, shall be assessed against your property.

Very truly yours,

Eugene H. Kasper, Commissioner
Engineering & Construction Division
